

# Paulo Barroso

Senior Mobile Engineer · React Native (iOS + Android)

Fortaleza, Ceará, Brazil · +55 85 99920-9820

[paulo.dev.85@gmail.com](mailto:paulo.dev.85@gmail.com) · [linkedin.com/in/paulo-cesar-barroso](https://linkedin.com/in/paulo-cesar-barroso) · [github.com/Pcfilho](https://github.com/Pcfilho) · [pcfilho.github.io](https://pcfilho.github.io)

## SUMMARY

Senior Mobile Engineer, 5+ years building production React Native apps across fintech, CRM, and IoT; specialized in TypeScript, the Expo/EAS ecosystem, and React Native's New Architecture. Known for closing quality gaps other teams deferred: built a healthcare app's first end-to-end test framework and nightly two-platform CI from zero, and enabled the React Compiler app-wide for a 91% cut in benchmarked re-renders. At Ploomes: 90% fewer support tickets, 40% fewer regressions, 70% faster deployments. Seeking a senior mobile role to own product quality and platform foundations end to end.

## SKILLS

### Languages:

TypeScript, JavaScript, Swift, Kotlin, SQL

### Mobile / React Native:

React Native (New Architecture · Fabric · TurboModules), Expo, EAS, React Compiler, React Navigation, Reanimated, Gesture Handler, NativeWind, Gluestack-UI, native iOS (Live Activities / WidgetKit)

### State & Data:

Redux, Zustand, TanStack Query (React Query), React Hook Form, Zod, RealmDB, expo-SQLite, Drizzle ORM, OData

### Testing & CI/CD:

Jest, Maestro (E2E), GitHub Actions, Bitrise, CodePush / EAS Update (OTA), baseline-ratchet quality gates

### Cloud, Services & Design:

AWS, Firebase, Supabase, Sentry, Amplitude, RevenueCat, LaunchDarkly, UJET (Google Cloud CCAI), Customer.io, Pluggy (Open Finance), Figma

## EXPERIENCE

### Senior React Native Engineer - Full time

Collective Health | 01/2026 – Present

App: Collective Health - [App Store](#) · [Google Play](#)

- Built the team's first end-to-end test framework from zero: Maestro with 32 cross-platform flows across 11 feature areas, plus a zero-dependency Node mock server (26+ routes) that made full auth testing runnable on the Android emulator for the first time.
- Wired the E2E suite into a nightly iOS and Android CI pipeline, cutting warm Android runs from ~75 to ~16 minutes via source-keyed build caching, and added an automated nightly report (pass rate, coverage, flake classification) for non-technical stakeholders.
- Shipped three regression-blocking PR quality gates (TypeScript, ESLint, commit and branch conventions) using a baseline-ratchet design that stops new errors without blocking the existing backlog, each backed by unit tests.
- Led the React Native 0.83.1 New Architecture stabilization, migrating three deprecated libraries (splash screen, filesystem, push notifications) onto Fabric and TurboModules with no user-visible regression and clearing 449 TypeScript and 149 React-hook violations.
- Enabled the React Compiler app-wide, cutting benchmarked re-renders by 91% (55 to 5) across 585 cleanly compiled components, and root-caused an Android fragment-restoration crash affecting 153 production users.
- Centralized chat and notification SDK init (UJET / Google Cloud CCAI, Customer.io, Firebase Messaging) across 5 files and fixed iOS cold-boot deep-link reliability.
- Extended AI-powered claim search to Dental and Vision on the member app (500K+ members).

Key Technologies and Tools: React Native (New Architecture), TypeScript, Maestro, React Compiler, Fabric, TurboModules, GitHub Actions, Jest, Node, Swift, Kotlin, LaunchDarkly, UJET (Google Cloud CCAI), Customer.io, Firebase, Sentry, Amplitude, Apple Wallet

### Mobile Developer - Part time

Fintech Freelance | 03/2026 – Present

App: Pluma Finance - [App Store](#)

- Shipped a personal-finance iOS app from zero to production as the sole engineer with React Native + Expo, driven end-to-end through an agentic AI workflow (Claude Code).
- Implemented Supabase auth (PKCE, TOTP 2FA) and Open Finance integration via Pluggy, backed by a network-aware tRPC + TanStack Query data layer.
- Delivered a modern UI with native iOS Liquid Glass and Reanimated animations, RevenueCat subscriptions, and Sentry monitoring, with a full EAS Build + EAS Update (OTA) pipeline on GitHub Actions, tested with Jest and Maestro.

Key Technologies and Tools: React Native, Expo, RevenueCat, Supabase, Claude, Sentry, Maestro, Jest, GitHub Actions, EAS

### Mobile Developer - Full time

Ploomes | 05/2023 – 01/2026

App: Ploomes CRM - [App Store](#) · [Google Play](#)

- Engineered a robust offline architecture using RealmDB and OData, reducing support tickets by 90% and ensuring reliable synchronization in low-connectivity environments.
- Enhanced core UI/UX flows with React Native, Reanimated and Gesture Handler, delivering intuitive CRUD, chart, and map experiences that increased user engagement and data clarity.
- Developed an offline-cached universal search with TypeScript and Redux, supporting 30+ daily queries per user and improving accessibility for 5,000+ active users.
- Spearheaded an automated testing pipeline with Jest (unit) and Maestro (E2E), cutting regression incidents by 40% and improving release confidence across teams.
- Streamlined CI/CD workflows using Bitrise, CodePush (OTA updates), and GitHub Actions, reducing manual deployment time by 70% and ensuring consistent store releases.

Key Technologies and Tools: React Native, TypeScript, Redux, Jest, Swift, Kotlin, CodePush, Bitrise, Zustand

### Mobile Developer - Full time

Agrolite | 01/2021 – 05/2023

App: Agrolite Gestor - [App Store](#) · [Google Play](#)

- Engineered an offline-first architecture in Kotlin for the Farm Operations App, enabling full field operation and conflict-free sync in zero-connectivity environments.
- Integrated Bluetooth and WebSocket communication through custom Native Modules, enabling real-time connectivity and control of proprietary farm hardware.
- Modernized the Farm Management App in React Native, redesigning the home dashboard with charts, goal tracking, and camera grid views, increasing app usage by 22%.

Key Technologies and Tools: React Native, Kotlin, TypeScript, Reanimated, React Navigation, Firebase, AWS

### Mobile Developer - Part time

Freelance | 06/2020 – 01/2021

- Built and shipped client apps from concept to store release with React Native, TypeScript, and CodePush (OTA) for startups and small businesses.

## PROJECTS

### Daily Logs - Workout Tracker - Personal project

01/2025 – Present | App Store: in review

- Built and submitted to the App Store (currently in review) an offline-first workout-tracking app from zero with React Native, React 19 with the React Compiler and the New Architecture enabled, driven end-to-end through an agentic AI workflow (Claude Code).
- Architected a fully offline local data layer with expo-SQLite + Drizzle ORM, designing a three-tier schema (catalog, template, session) with soft deletes, UUID keys, and idempotent versioned seed packs (128+ exercise catalog), exposed through a clean repository pattern.
- Engineered live workout state on iOS with a custom native Swift module for Live Activities / Dynamic Island and a WidgetKit workout widget (@bacons/apple-targets), persisting rest-timer, current-exercise, and resume-session state across cold boots.
- Automated the full release lifecycle with GitHub Actions: lint + Jest gates, automatic semantic version bumping, and EAS Build + EAS Update (OTA) across development/preview/production channels, with Maestro E2E flows covering critical journeys.

Key Technologies and Tools: React Native, Expo, EAS, TypeScript, Drizzle ORM, expo-SQLite, Swift (Live Activities/WidgetKit), Zustand, TanStack Query, React Hook Form, Zod, Reanimated, NativeWind, Jest, Maestro, GitHub Actions, Claude, Tailwind

## EDUCATION

### Bachelor's - Computer Science

University of Fortaleza (Unifor) | 2025

## LANGUAGES & CERTIFICATIONS

Portuguese (Native) · English (C1, Advanced) · Spanish (Intermediate)

English Course Certificate (C1) · Fisk, Richard Hugh Fisk Foundation · 2018
