SUMMARY

Senior Mobile Engineer, 5+ years building production React Native apps across fintech, CRM, health, and IoT, shipping web and backend to production along the way and in my own products. Specialized in TypeScript, the Expo/EAS ecosystem, and React Native's New Architecture. Known for closing quality gaps other teams deferred: built a healthcare app's first E2E test framework and nightly two-platform CI from zero, and enabled the React Compiler app-wide for a 91% cut in re-renders.

EXPERIENCE

Senior React Native Engineer - Full time

Collective Health | 01/2026 – Present

App: Collective Health - [App Store](#) · [Google Play](#)

- Led the React Native 0.83 New Architecture stabilization on a member app serving 500K+ members, migrating three deprecated libraries (splash screen, filesystem, push notifications) onto Fabric and TurboModules with no user-visible regression and clearing 449 TypeScript and 149 React-hook violations.
- Enabled the React Compiler app-wide, cutting benchmarked re-renders by 91% (55 to 5) across 585 compiled components, and root-caused an Android fragment-restoration crash affecting 153 production users.
- Built the team's first end-to-end test framework: Maestro with 32 cross-platform flows across 11 feature areas, plus a Node mock server (26+ routes) that made full auth testing runnable on the Android emulator for the first time.
- Wired the E2E suite into nightly iOS and Android CI, cutting warm Android runs from ~75 to ~16 minutes, and shipped three regression-blocking PR quality gates with a baseline-ratchet design that stops new errors without blocking the backlog.
- Centralized chat and notification SDK initialization (UJET / Google Cloud CCAI, Customer.io, Firebase Messaging) and fixed iOS cold-boot deep-link reliability.

Key Technologies and Tools: React Native (New Architecture), TypeScript, Maestro, React Compiler, Fabric, TurboModules, GitHub Actions, Jest, Node, Swift, Kotlin, LaunchDarkly, UJET (Google Cloud CCAI), Customer.io, Firebase, Sentry, Amplitude, Apple Wallet

Fullstack Developer - Part time

Fintech Freelance | 03/2026 – Present

App: Pluma Finance - [App Store](#)

- Shipped Pluma Finance, a personal-finance iOS app, from first commit to the App Store with React Native + Expo, working end to end with a small freelance team in an AI-assisted workflow (Claude Code).
- Implemented Supabase auth (PKCE, TOTP 2FA) and Open Finance integration via Pluggy, owning the Supabase Postgres backend (RLS) behind a network-aware tRPC + TanStack Query data layer.
- Delivered a modern UI with native iOS Liquid Glass and Reanimated animations, RevenueCat subscriptions, and Sentry monitoring, with a full EAS Build + EAS Update (OTA) pipeline on GitHub Actions, tested with Jest and Maestro.

Key Technologies and Tools: React Native, Expo, RevenueCat, Supabase, Claude, Sentry, Maestro, Jest, GitHub Actions, EAS

Mobile Developer - Full time

Ploomes | 05/2023 – 01/2026

App: Ploomes CRM - [App Store](#) · [Google Play](#)

- Engineered an offline architecture with RealmDB and OData that cut support tickets by 90% and kept field reps' data in sync in low-connectivity areas.
- Built an offline-cached universal search with TypeScript and Redux, serving 30+ queries per user a day across 5,000+ active users.
- Rebuilt core CRUD, chart, and map flows with React Native, Reanimated and Gesture Handler.
- Set up the app's automated testing pipeline with Jest (unit) and Maestro (E2E), cutting regression incidents by 40%.
- Streamlined CI/CD with Bitrise, CodePush (OTA), and GitHub Actions, reducing manual deployment time by 70%.

Key Technologies and Tools: React Native, TypeScript, Redux, Jest, Swift, Kotlin, CodePush, Bitrise, Zustand

Mobile Developer - Full time

Agrolite | 01/2021 – 05/2023

App: Agrolite Gestor - [App Store](#) · [Google Play](#)

- Engineered an offline-first architecture in Kotlin for the Farm Operations App, enabling full field operation and conflict-free sync in zero-connectivity environments.
- Integrated Bluetooth and WebSocket communication through custom Native Modules, enabling real-time connectivity and control of proprietary farm hardware.
- Modernized the Farm Management App in React Native, redesigning the home dashboard with charts, goal tracking, and camera grid views, increasing app usage by 22%.

Key Technologies and Tools: React Native, Kotlin, TypeScript, Reanimated, React Navigation, Firebase, AWS

Fullstack Developer - Part time

Freelance | 06/2020 – 01/2021

- Built and shipped client apps from concept to store release with React Native, TypeScript, and CodePush (OTA) for startups and small businesses.
- Delivered the full product around each app: Node APIs, Firebase backends (Auth, Firestore, Cloud Messaging) and React admin panels, owning mobile, web and backend end to end.

PROJECTS

Nino - AI Pet Companion - Personal project

2026 | In TestFlight beta, launching soon

- Designing and building a consumer pet-care product end to end in a Turborepo + pnpm monorepo: an Expo (SDK 56, New Architecture) app serving iOS, Android and web from one codebase, a NestJS API in strict TypeScript with the health domain modelled in PostgreSQL + Drizzle across 17 modules, and shared Zod contracts consumed by both sides.
- Built a multi-provider LLM layer (Anthropic and Google) behind generation, chat and daily-digest modules, with provider balancing and per-account spend controls so inference cost stays bounded as usage grows.
- Wired the platform end to end: Clerk auth, Google Cloud Storage and Secret Manager, Firebase App Check, RevenueCat subscriptions, Sentry and PostHog, plus GitHub Actions CI and deploy pipelines over 135 test files and Maestro E2E flows.

Key Technologies and Tools: Expo, React Native, NestJS, TypeScript, PostgreSQL, Drizzle, Zod, Turborepo, Anthropic SDK, Google GenAI, RevenueCat, Sentry, PostHog, Maestro, GitHub Actions, Docker

Daily Logs - Workout Tracker - Personal project

01/2025 – Present | [App Store](#) · [Web](#)

- Built solo and shipped to the App Store and the web an offline-first workout tracker with React Native (React 19, React Compiler, New Architecture), a fully offline expo-SQLite + Drizzle ORM data layer, and a custom native Swift module for Live Activities, Dynamic Island and a WidgetKit widget.
- Automated the full release lifecycle with GitHub Actions (lint and Jest gates, semantic version bumping, EAS Build + EAS Update OTA channels, Maestro E2E), driven end to end through an agentic AI workflow (Claude Code).

Key Technologies and Tools: React Native, Expo, EAS, TypeScript, expo-SQLite, Drizzle, Swift (Live Activities/WidgetKit), Jest, Maestro, GitHub Actions

SKILLS

Languages: TypeScript, JavaScript, Swift, Kotlin, Objective-C, Java, SQL

Mobile / React Native: New Architecture (Fabric, TurboModules, React Compiler), Expo and EAS, offline-first sync, push notifications, deep linking, biometric authentication; Redux, Zustand, TanStack Query, Zod; native iOS (SwiftUI, UIKit, Live Activities / WidgetKit, StoreKit, APNs) and Android (Jetpack Compose, Room, WorkManager, Bluetooth native modules)

Web & Backend: React, Next.js (App Router, SSR / ISR), Tailwind, accessibility (WCAG); Node, NestJS, Express, Fastify, tRPC, REST, OData, WebSocket, message queues (SQS, RabbitMQ, BullMQ), OAuth2 / OIDC, JWT, PKCE, TOTP

Data: PostgreSQL, MySQL, SQL Server, MongoDB, Redis, RealmDB, expo-SQLite, Drizzle ORM, Prisma, schema design and migrations

Testing & CI/CD: TDD, Jest, React Native Testing Library, Maestro (E2E), Detox, Playwright, MSW, GitHub Actions, Bitrise, Fastlane, CodePush / EAS Update (OTA), Docker, Kubernetes, TestFlight and Play Console, feature flags, monorepo (Turborepo, Nx)

Cloud, Services & AI: AWS (S3, Lambda), Firebase, Supabase, Vercel, Sentry, RevenueCat, LaunchDarkly, Pluggy (Open Finance); LLM features in product (API, RAG, agents), LLM output evals, MCP, Claude Code, Cursor, Copilot

EDUCATION & LANGUAGES

Bachelor's - Computer Science

University of Fortaleza (Unifor) | 2025 · Portuguese (Native) · English (C1 Advanced, Fisk certificate 2018) · Spanish (Intermediate)
